

Renewable Energy

Solar and wind power, the cost effective energy solution of the future, enhancing the quality of life in a sustainable manner

Solar Utilities for large scale production of power supporting municipal and national grid systems for sustainable cost effective power production.

Solar Electricity for Remote applications

Solar Power for Telecom

applications enhancing reliability
while maintaining low power
operating costs

Mobile and Stationary Solar irrigation systems for remote agricultural output

Solar Hot water systems
for your school, clinic, the
Public Bath or for your
home. Ensuring
continuous and reliable
output powered by the
sun.

Wind Power

for irrigation as well as power generation in various sizes for various wind regimes
